Perspectives

US High Yield

Market Update

The ICE BofA Merrill Lynch U.S. High Yield Index generated a positive return of 1.15% during November driven primarily by the results of the US election, in which markets responded positively to Republicans retaking the White House and control of Congress. Additionally, the Federal Reserve cut rates by another 25bps, which further added to the market's positive sentiment. The high yield market saw an inflow during November of approximately \$1.8 billion. Capital market activity decreased 62% vs. October as 20 bonds priced for \$10.4 billion during the month. There were two high yield bond defaults totaling \$1.46 billion and two distressed exchanges during the month. The par-weighted default rate excluding distressed exchanges decreased from 0.55% at the beginning of the month, to 0.34% at the end of the month.

During November, U.S. High Yield outperformed U.S. Treasuries (+0.82%) but underperformed U.S. Corporates (+1.20%) and U.S. Equities (S&P 500 +5.87%). Within U.S. High Yield, BB-rated credits (+1.05%) underperformed single B-rated credits (+1.11%) and CCC and lower-rated issues (+1.63%). From a sector perspective, all the 18 sectors in the index posted positive monthly returns. The best performing sectors were Media (+2.03%), Energy (+1.51%), and Financial Services (+1.49%). On a relative basis, the worst performing sectors were Utility (+0.51%), Technology & Electronics (+0.55%) and Capital Goods (+0.73%). The High Yield Index's Option Adjusted Spread was 274 basis points at the end of November, 14 bps tighter for the month. The yield-to-worst of the index ended the month at 7.16%, a decrease of 17 basis points from the start of the month (7.33%). Finally, the High Yield Index's average price was \$96.40 at month end, \$0.68 higher than the \$95.72 average price at the start of the month.

US Short Duration High Yield: Strategy Activity and Performance

Portfolio management comments

AXA IM's U.S. Short Duration High Yield Strategy delivered a solid return during November, however could not keep pace with the overall market, capturing roughly 60% of the market's +1.15% return (gross and net of fees, USD). Performance was somewhat limited by our up-in-quality positioning, the shorter duration nature of our holdings, and security selection within the media sector. Short duration high yield continues to benefit from the flatness of the high yield yield-curve, capturing roughly 85-90% of the overall market's yield.

The yield-to-worst of the Strategy (exclusive of cash) tightened by 5bps to 6.10%, while the market yield tightened by 17 bps to 7.16%. The Option Adjusted Spread of the Strategy tightened by 3 bps to 164 bps. The overall Strategy duration (using a calculation of modified duration-to-worst) decreased to 1.8 and market duration also decreased to 3.3. Position count remained stable in November and the Strategy remains well diversified. We believe that diversification of portfolio holdings is important for the Strategy and helps to manage credit risk. Our top holding, a 1.5% position, was Commscope Technologies. At month-end, approximately 30,6% of the portfolio was invested in securities in excess of three years, which we expect to be redeemed early. This is stable versus the previous month.

Market technicals were supportive yet again as flows remained positive, and primary market activity slowed but remained refinancing focused. Inflation data, Fed rate cuts, slowing economic growth, and the impact of the new Republican administration remain the primary drivers of market movements, however we still believe that corporate credit fundamentals remain healthy and the high yield default rate will continue to be benign. Valuations from a yield perspective remain attractive and offer a coupon-like return, and with markets focused on the trajectory of interest rates and the impact of a modest US slowdown, we believe the Short Duration Strategy remains well positioned in this market environment.

US Core High Yield: Strategy Activity and Performance

Portfolio management comments

AXA IM's core unconstrained US high yield strategy slightly underperformed the US high yield market during the month of November (both net and gross, USD). The strategy's security selection was the main driver of the relative underperformance while its macro risk positioning was largely neutral. More specifically, selection in the highest yielding segment of the market was the largest detractor from relative performance.

From a sector perspective, security selection within in the Media industry was the largest detractor from relative performance. This was driven in part by exposure to Gray TV, an owner of local television stations, whose earnings report and outlook disappointed the market. Selection in the Telecommunications sector was the largest positive contributor as the portfolio benefitted from its exposure to Zayo, a provider of telecom services, who reported generally positive earnings results.

US Core High Yield: Strategy Activity and Performance

Portfolio management comments

Our flagship strategy finished the month with a yield-to-worst of 6.91% (exclusive of cash) which was lower than the benchmark's yield-to-worst of 7.16%. The strategy's duration-to-worst of 3.1 (ex-cash) was also just below the benchmark's duration-to-worst of 3.3. We continue to believe that the default rate of the US high yield bond market is unlikely to increase to a level significantly higher than its long-term average. Based on our outlook for the economy and current valuations, we maintain that the US High Yield market can deliver an attractive carry-driven total return over the next 12 months.

Broad Risk Positioning

US Dynamic High Yield: Strategy Activity and Performance

Portfolio management comments

AXA IM's US Dynamic High Yield Bonds outperformed the ICE B of A Merrill Lynch US High Yield Index (both net-of-fees and gross-of-fees, USD) during the month of November. The strategy underperformed the S&P (+5.7%), the Russell 2000 (+10.8%) and the triple-C market (+1.6%). The strategy's outperformance versus the index was primarily driven by security selection in the single-B and the BB part of the market and the strategy's allocation to the CCC part of the market. The strategy's derivative positions had a modest positive impact on performance during the month.

From a sector perspective, the strategy's performance was positively impacted by its security selection in the Telecom sector, primarily driven by the strategy's overweight position in Zayo. Performance was negatively impacted by security selection in the Consumer sector, primarily driven by the strategy's overweight position in Club Car and KIK Consumer Products.

The strategy finished the month with a yield-to-worst of 8.1% (exclusive of cash and derivatives) compared to the benchmark yield-to-worst of 7.2%. The duration-to-worst of the strategy was 2.9 compared to the benchmark duration-to-worst of 3.3. HY bond yields remain above recent historical averages, providing greater opportunities for the strategy. We continue believe the risk of a severe recession and a rise in the default rate of the US HY bond market to a level significantly higher than the long-term average is a low probability. The strategy will continue to participate in the primary market to provide incremental risk-adjusted return. As of month-end, the strategy holds 18 derivative positions related to 15 issuers. All of these derivative positions are expressing long credit views on individual issuers, and including these derivative positions, the strategy's exposure was 109% gross and 109% net.

US High Yield Risks Overview

CREDIT RISK - If an issuer of bonds defaults on its obligations to pay income or repay capital, it may result in a decrease in portfolio value. The value of a bond (and subsequently, the portfolio) is also affected by changes in credit rating downgrades and/ or market perceptions of the risk of future default. Investment grade issuers are regarded as less likely to default than issuers of high yield bonds. High-yield, lower-rated, securities involve greater risk than higher-rated securities. Portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not.

RISK OF CAPITAL LOSS – Any investment in our high yield strategies are not guaranteed and returns can be negative. The performance of a portfolio may not be consistent with the objectives of investors and their investment may not be fully returned.

INTEREST RATE RISK - Fluctuations in interest rates will change the value of bonds, impacting the value of the investment portfolio. Often, when interest rates rise, the value of the bonds fall and vice versa. The valuation of bonds will also change according to market perceptions of future movements in interest rates.

LIQUIDITY RISK - Some investments may trade infrequently and in small volumes and the risk of low liquidity level in certain market conditions might lead to difficulties in valuing, purchasing or selling bonds.

HIGH YIELD BOND RISK - The portfolio will be exposed to a risk related to investments in high yield financial instruments. These instruments present higher default risks than those of the investment grade category. In case of default, the value of these instruments may decrease significantly, which would affect the value of the portfolio. Lower-rated securities generally tend to reflect short-term corporate and market developments to a greater extent than higher-rated securities which respond primarily to fluctuations in the general level of interest rates.

RE-INVESTMENT RISK - Reinvestment risk describes the risk that, as interest rates or market environment changes, the future coupons and principal from any bond may have to be reinvested in a less favorable rate environment. This is more likely to occur during periods of declining interest rates when issuers can issue bonds with lower levels of coupon. Re-investment risk may be greater with callable bonds.

LEVERAGE RISK - Portfolios may invest in derivatives including Credit Default Swaps (CDS) and Total Return Swaps (TRS) for leverage purposes. The use of derivatives can involve significant economic leverage and may, in some cases, involve a significant risk of loss. The low initial margin deposits normally required to establish a position in such instruments permits leverage. As a result, a relatively small movement in the price of the contract and/or of one of its parameters may result in a profit or a loss that is high in proportion to the amount of assets actually placed as initial margin and may result in unlimited further loss exceeding any margin deposited.

US SHORT DURATION HIGH YIELD COMPOSITE

GIPS Compliant Performance Presentation

Investment Strategy Objective

Aims to generate high current income by investing in better-quality, non-investment grade debt of U.S. companies with an expected redemption of three years or less.

Composite Benchmark

The "US Short Duration High Yield" composite is not shown against a benchmark, since the strategy is an absolute return strategy and not managed against a benchmark.

GIPS® Performance Disclosure Notes

Error Disclosure

In previous versions of the GIPS Composite slide in this Perspectives document from December 2023 to February 2024, there were material and/or immaterial errors in the 3 and/or 6-month cumulative performance. This error resulted from an anomaly between a third-party and our local systems.

An internal GIPS review revealed that some GIPS-required information was omitted or erroneous in prior iterations of this GIPS presentation, including:

- For all composites: the calendar year composites and respective indexes volatility 3y % were omitted. The Composites Total Firm AUM for 2022 was inaccurately stated.
- Dynamic HY Composite and Index: Calendar year 2014 partial and 2015 returns were omitted as well as the 2014 and 2015 composite assets and number of portfolios.

These errors and omissions have all been addressed in Perspectives documents dated after March 31, 2024.

Claim of Compliance

AXA IM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. AXA IM has been independently verified for the periods from December 31, 1999 through December 31, 2022. The verification reports are available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Presentation of the Firm

AXA IM is an active long-term, responsible multi-asset manager with investment centres in the Americas, Asia Pacific and Europe offering the following investment capabilities:

Equity Fundamental (formerly Framlington) - active, bottom-up stock selection approach for core equities and thematic equity strategies incorporating specialist investment capabilities and responsible investing (RI);

Equity QI (Quant Investing) - offering quantitative investing by the use of technology and modelling to deliver fundamental strategies including advanced factor, systematic alpha and targeted outcome, underpinned by environmental, social and governance (ESG) principles;

Fixed Income - a robust, repeatable process, which involves bottom-up credit analysis and top-down macroeconomic research to deliver outcome-oriented solutions that span the fixed income spectrum; a range of high yield strategies investing within and across regions, sectors and maturities. Dedicated high yield teams employ a consistent investment process which has been tested over a range of market cycles and conditions; a strong bottom-up credit analysis and top-down macroeconomic research approach for traditional, benchmarked to fully flexible strategies which employ several different investment styles, including active and buy-and-maintain;

Multi Asset - a combined fundamental top-down and bottom-up analysis with embedded risk monitoring to all client types for outcome-oriented and customized multi-asset solutions.

Alternative Credit - a broad range of alternative sources of return from across the credit continuum, beyond traditional credit investments, to suit various risk/return and liquidity profiles through standalone and multi-strategy investments;

Listed Real Assets Equity

GIPS firm historical changes are available upon request.

List of Composites and Pool funds

A list of composite descriptions and a list of fund descriptions for limited and broadly distributed pooled funds are available upon request.

Use of derivatives:

Portfolios may invest in derivatives including Credit Default Swaps (CDS) and Total Return Swaps (TRS) for leverage purposes. Please refer to composite investment strategy for any use of derivatives.

Portfolio Valuation

Portfolios are valued according to the market closing prices each day, except for certain portfolios valued in Germany, which use the closing price of the previous day, and the UK, where the price used is the 2pm price of the same day. In order to apply this valuation policy, the NAV of the day following the valuation date is used for certain portfolios. Dividends paid on securities in the portfolio are accounted for using ex-dividend date and are gross of any withholding taxes. Buy and sell transactions are taken into account using trade-date valuation after confirmation of the trade by the counterparty, except in Germany where settlement date valuation is used. Accrued interest on debt securities is recorded each time the portfolio is valued. All proceeds, including realized and unrealized gains or losses in the portfolio are included in the value of assets. There are minor exceptions to these general rules for specific types of portfolios. Some securities in portfolios of US High Yield composites are valued by reference to broker quotes.

Minimum Asset Level & Total Firm Assets

The minimum portfolio size for the US High Yield and US Investment Grade composites is 10,000,000 USD. If the portfolio falls below 10,000,000 USD for more than three months it is excluded from the performance calculations for the following month. For all other composites, the upper threshold is defined at 10,000,000 EUR the lower threshold at 8,000,000 EUR, with a 6-month grace period. AUM figures for the Firm include all portfolios falling within the definition of the Firm.

GIPS® Performance Disclosure Notes (continued)

Significant Cash Flows

If the average cash balance of a portfolio is above 10% for a specific month, the entire portfolio is temporarily removed from the composite performance for that particular month. Additional information regarding the treatment of significant cash flows is available upon request.

Dispersion

Dispersion is defined as the standard deviation of portfolios returns for the period in question, taking into account the portfolio beginning relative weight (equally weighted measure until December 2020, asset weighted dispersion measure since January 2021). It is only displayed if there are at least five portfolios that remain for the entire period in the composite.

Currency Used to Express Performance

Composite performance figures are presented in the currency of the composite.

Performance Results / Fees

Composite returns are calculated both gross and net of fees. Gross of fees returns are calculated gross of management and custodial fees and net of all trading expenses. Net performance results shown are net of a model management fee which represents the highest fee applicable to institutional investors shown below:

US Core High Yield Composite: First \$50 million: 0.48%; next \$50 million: 0.44%, next \$50 million: 0.41%, next \$50 million: 0.39%, Amount above \$200 million: 0.37%.

US Short Duration High Yield Composite: Flat fee: 0.45%.

US Dynamic High Yield Composite: Flat fee: 0.60%.

US Enhanced High Yield Composite: Flat fee: 0.95%

US Investment Grade Corporate Bond Composites: First \$50 Million: 0.26%; next \$50 million: 0.24%; next \$50 million: 0.20%; next \$50 million: 0.18%. Amount above \$200 million: 0.17%.

Global High Yield Composite: First \$50 million: 0.48%; next \$50 million: 0.44%, next \$50 million: 0.41%, next \$50 million: 0.39%, Amount above \$200 million: 0.37%.

US High Yield Low Carbon Composite: First \$50 million: 0.48%; next \$50 million: 0.44%, next \$50 million: 0.41%, next \$50 million: 0.39%, Amount above \$200 million: 0.37%.

Benchmarks

The composite may be managed against a specific benchmark as indicated on the composite page. The extent to which any given composite invests in countries or regions not included in the benchmark depends on the limits (if any) specified in the investment management contracts of the individual portfolios in the composite. In general, such investment is marginal and is typically less than 10% for any given portfolio.

Compliance with Local Laws

This performance presentation does not conflict with any relevant local laws in any of the AXA IM management centres included in the Firm perimeter.

Calculation Methods

Composite performance is calculated on a monthly basis as follows:

- The portfolios entering the performance calculation are determined according to the Minimum Asset Level described above.
- Each portfolio brings its own specific start and end dates to the calculation, depending on the particular valuation dates of the portfolio.
- The performance of each portfolio is calculated using the start and end dates relevant to the period in question, and using daily-weighted cash flows.
- The performance of a composite is calculated as a weighted average (using each portfolio's assets under management as at each portfolio's specific start date for the period in question) of the performances of the portfolios.
- Quarterly, annual, cumulative and since-inception returns are calculated by linking the composite monthly returns through compounded multiplication..

Disclaimer

Not for Retail distribution: this document is intended exclusively for Professional, Institutional, Qualified or Wholesale Investors / Clients, as defined by applicable local laws and regulation. Circulation must be restricted accordingly.

This document is being provided for informational purposes only. Information concerning portfolio holdings is representative of the target portfolios for the investment strategies described herein and does not necessarily reflect an actual account or strategy. Actual portfolios may differ as a result of client-imposed investment restrictions, the timing of client investments and market, economic and individual company considerations. The holdings shown herein should not be considered a recommendation or solicitation to buy or sell any particular security, do not represent all of the securities purchased, sold or recommended for any particular advisory client, and in the aggregate may represent only a small percentage of an account's portfolio holdings. Sector allocations are subject to change at any time and are not recommendations to buy or sell any security. Certain information has been obtained from third party sources and, although believed to be reliable, has not been independently verified and its accuracy or completeness cannot be guaranteed. Data and performance information in the document have not been yet certified by outside auditors.

The performance information shown herein reflects the performance of a composite of accounts that does not necessarily reflect the performance that any particular account investing in the same or similar securities may have had during the period. Actual portfolios may differ as a result of client-imposed investment restrictions, the timing of client investments and market, economic and individual company considerations. The examples provided above are for illustrative purposes only and are intended to reflect the typical securities, sectors, and/or geographies that could be deployed by the strategy to generate the target returns. These examples do not represent all of the securities purchased, sold or recommended for the client's accounts. No representation is made that these examples are past or current recommendations, that they should be bought or sold, nor whether they were successful or not.

The performance information shown herein may reflect the performance of a composite of accounts or a representative account of the strategy, as specified. Composite: The performance of a composite of accounts does not necessarily reflect the performance that any particular account investing in the same or similar securities may have had during the period. Actual performance may differ from composite performance as a result of client-imposed investment restrictions, the timing of client investments and market, economic and individual company considerations. Representative Account: Representative accounts have been selected based on objective, non-performance based criteria, including, but not limited to the size and the overall duration of the management of the account, the type of investment strategies and the asset selection procedures in place. Therefore, the results portrayed relate only to such representative accounts and are not indicative of the future performance of such accounts or other accounts, products and/or services described herein. Composite and representative account performance may be similar to the applicable GIPS composite results, but may not be identical and are not being presented as such. The results portrayed relate only to such accounts and are not indicative of the performance of other accounts in the relevant strategy, and an investor's actual experience may vary due to various factors such as inception date of the account, restrictions on the account, along with other factors.

Net Performance shown is calculated after the deduction of all management fees and all trading expenses. Net performance results shown are net of a model management fee which represents the highest fee applicable to institutional investors. Gross performance shown is calculated before management fees, expenses, carried interest, taxation costs and other expenses the investor may incur and net of trading expenses. An investor's return will be reduced by management fees and other expenses. All returns assume the reinvestment of distributions.

The information has been established on the basis of data, projections, forecasts, anticipations and hypothesis which are subjective. This analysis and conclusions are the expression of an opinion, based on available data at a specific date. Due to the subjective aspect of these analyses, the effective evolution of the economic variables and values of the financial markets could be significantly different for the projections, forecast, anticipations and hypothesis which are communicated in this material.

The risk information provided herein is not sufficient to support an investment decision and is qualified in its entirety by the more complete disclosures, risk factors and other terms available upon request from AXA Investment Managers.

The Adviser is not a tax or legal advisor. Prospective investors should consult their tax and/or legal advisors before making tax-related and/or legal-related investment decisions.

The ICE BofA US High Yield Index is composed of high-yield corporate bonds and other distressed securities. Taxable and tax-exempt US municipal, DRD eligible and defaulted securities are excluded from the Index. Indices are rebalanced monthly by market capitalization. The BofA Merrill Lynch High Yield Index is an unmanaged index consisting of U.S. dollar denominated bonds that are rated BB1/BB+ or lower, but not currently in default. No assurance can be given that the strategy/fund will be successful or that investors will not lose some or all of their capital. Cash flows from bond payments that are received during the month are retained in the index until the end of the month and then are removed as part of the rebalancing. Cash does not earn any reinvestment income while it is held in the index. Information concerning constituent bond prices, timing and conventions and index governance and administration is provided in the ICE Bond Index Methodologies, which can be accessed on our public website (<https://indices.ice.com>)
